

CROMOCOL *Scandinavia* Tropical Chamber

The Cromocol Tropical Chamber is designed to determine the moisture resistance of dry films and to test the ageing of adhesives and sealants under moist conditions. The test is performed under 100% relative humidity and a cycled temperature. The Tropical Chamber comes with a preprogrammed test cycle according to standard, but it also offers the possibility to set your own temperature.

This product complies to the following standards:

STD 423-0018

STD 1027, 3375

By removing the top cabinet and adding our “Rabbit Cage” top the instrument will also comply to ISO 6270-1.

(Has to be ordered seperately)
